DETAILED ACTION

35 USC § 112 - 1ST PARAGRAPH

- 1.** The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 2.** **Claim(s) 1-36** are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention without undue experimentation.

In *In re Wands*, 858 F.2d 731,737, 8 USPQ2d 1400, 1404 (Fed. Cir. 1988) the court considered the issue of enablement in molecular biology. The Court summarized eight factors to be considered in a determination of "undue experimentation". These factors include: (a) the quantity of experimentation necessary; (b) the amount of direction or guidance presented; (c) the presence or absence of working examples; (d) the nature of the invention; (e) the state of the prior art; (f) the relative skill of those in the art; (g) the predictability of the art; and (h) the breadth of the claims. The Court also stated that although the level of skill in molecular biology is high, results of experiments in molecular biology are unpredictable.

To begin, the amount of direction or guidance provided is inadequate. For example: How is one to determine a relative order for two or more of said addressed fragments compared to a sequence of genomic DNA. In addition, there are no working examples that exemplifies how the invention (i.e. a method for determining a sequence boundary) is to be performed. Without at least one example, it is unlikely that any one skilled in the art can practice the invention as claimed. For the above reasons, it is the examiner's position that the subject matter claimed was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention without undue experimentation.

CONCLUSION

- 3.** **Claim(s) 1-36** is/are rejected and/or objected to for the reason(s) set forth above.
